Gene-specific universal mammalian sequence-tagged site for SPTBNI.

Primer for the 3' end of the product is in exon 14. Human product is 1054 bp. Canine product is 900 bp. PCR conditions: Imin, 94 C, min 57 C, 5 min 72 C, 40 cycles (hot start).

PCR was performed on DNA from transformants of Arabidopsis thaliana
plants from INRA (Versailles). The DNA fragment(s) resulting from
the PCR were directly sequenced from the left or the right border
to determine the genomic sequence flanking the insertion. T-DNA
derived sequences were removed. Information to order the
corresponding mutant line and a link to a database providing a
graphical display of the insertion site are available at
http://dbsap.versailles.inra/fr/publiclines/. This sequence has
been generated in the framework of the French plant genomics
program 'Genoplante' (http://www.genoplante.com and
http://genoplante-info.infobiogen.fr).

Bauer, H.M., Gravitt, P.E., Greer, C.E., Impraim, C.C.,
Manos, M.Michele., Resnick, R.M. and Zhang, T.Yi.
Detection of human papillomavirus by the polymerase chain reaction
Patent: US 5639871-A 60 17-UUN-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PAT 03-APR-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 (bases 1 to 19)
van der Bruggen, P. and Boon-Falleur, T.
Tumor rejection antigens which correspond to amino acid sequences
in tumor rejection antigen precursor bage, and uses thereof
Patent: US 5683886-A 7 04-NOV-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 (bases 1 to 19)
Marshall, R.L., Carrino, J.J. and Sustachek, J.C.
Amplification of RNA sequences using the ligase chain reaction
Patent: US 5686272-A 24 11-NOV-1997;
                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Dhillips, M.I. and Zhang, Y.
Phillips, M.I. and Zhang, Y.
Antisense compositions targeted to .beta.l-adrenoceptor-specific
mRNA and methods of use
Patent: US 6489307-A 135 03-DEC-2002;
Location/Qualifiers
 Li,R.-h. and Mather,J.P.
Human Mullerian duct-derived epithelial cells and methods of
isolation and uses thereof
Patent: US 6416999.A 2 09-UUL-2002;
Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 (bases 1 to 19)
Okubara, P.A., Blechl, A.E., Hohn, T.M. and Berka, R.M.
Nucleic acid sequences encoding cell wall-degrading enc
to engineer resistance to Fusarium and other pathogens
Patent: US 6521435-A 75 18-FEB-2003;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0.7%; Score 12.6; DB 1; Length 19; 78.9%; Pred.
